

ABSTRACT OF THE DISCLOSURE

A recording apparatus for effecting recording on a recording medium by a recording head includes a carriage for reciprocally scanning with the recording
5 head carried thereon, a guide member for guiding the reciprocal scanning of the carriage, a drive source for driving the reciprocal scanning of the carriage, a transmitting member for transmitting a driving force from the drive source to the carriage, a
10 holding member for holding the transmitting member, a projected portion disposed on the carriage and having the holding member mounted thereon, and an attenuating member for attenuating vibrations from the drive source between the carriage and the holding
15 member, the attenuating member being of a shape surrounding the projected portion of the carriage, and the holding member holding the transmitting member being mounted on the projected portion with the attenuating member interposed therebetween.
